

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning at page 22, line 13 as follows.

--This example illustrates that a detector that is capable of detecting the reaction in a reaction and/or detection microcavity can be linked to the arrangement and used to monitor the proceedings of the reaction. In this case reaction is adsorption/desorption to the separation media. The detectors used may be of the same kind as outlined in our copending patent application SE 0103118-6, which corresponds to U.S. provisional application No. 60/322,622, both filed September 17, 2001 (Gyros AB, Magnus Ljungström et al) that hereby is incorporated by reference.--
